

Bash Programming

TOTAL POINTS 10

1.	Which of the following are requirements for variable names?	1 point
	✓ The variable name starts with a letter.	
	Numbers are not allowed in variable names.	
	Every character in the name is lowercase.	
	Every character in the name is uppercase.	
2.	What does the exit status of a program indicate?	1 point
	The exit status of a program indicates how a program will be completed once it's exhausted all of its code.	
	 The exit status of a program indicates how many programs were running at the same time as a particular program. 	
	The exit status of a program indicates the value that was computed by the program.	
	The exit status of a program indicates whether the program was executed successfully or whether an error occurred.	
3.	What is printed to the console by the following command?	1 point
	1 echo Demetrius [[6 -eq 7]] echo Helena && echo Hermia [[7 -gt 4]]	7
	1 Helena 2 Hermia	
	Nothing is printed to the console.	
	Demetrius Hermia	
	1 Demetrius	
	2 Helena	
4.	Consider the following program called numrange.sh:	1 point
	1 #!/usr/bin/env bash	7
	2 # File: numrange.sh 3 odd=\$(echo "\$1 % 2" bc)	
	5	
	8 status="even" 9 else 10 status="odd"	
	11 fi 12 13 if [[\$1 -gt 0]] && [[\$1 -lt 10]]	
	14 then 15 location="in" 16 else	
	17 location="out of" 18 fi 19	
	20 echo "This number is \$status and \$location range."	
	Which of the following is the result of commands below?	
	1 bash numrange.sh 6 2 bash numrange.sh 11	
	3 bash numrange.sh 400 10	
	1 This number is even and in range. 2 This number is odd and out of range. 3 - error - too many arouments	

1 This number is even and out of range.
2 This number is odd and in range.
3 This number is even and out of range, This number is even and in range.
 This number is odd and out of range.
 This number is even and out of range. This number is odd and out of range.
 This number is even and in range.
 This number is even and out of range. 5. What is the result of the script below? 1 point 1 lab=(jeff roger brian)
2 lab[3]=sean
3 lab=("\${lab[*]}" "\${lab[*]}")
4 echo \${#lab[*]} O 9 O 1 O 6 2 6. Consider the following program called reqseq.sh: 1 point 1 #!/usr/bin/env bash 2 # File: repseq.sh 3 4 sequence=\$(eval echo {\$1..\$2}) for i in \$sequence

do

compute=\$(echo "\$i % \$3" | bc)

result="\$result \$compute"

do

ceho \$result

ceho \$result Which of the commands below would create the following output? 1 120120120 1 bash repseq.sh 1 6 2 bash repseq.sh 1 9 3 1 bash repseq.sh 1 6 3 1 bash repseq.sh 1 9 2 7. What's the purpose of the local keyword? 1 point O The local keyword stores the value of several variables locally so that they can be accessed later on within a script. The **local** keyword allows you to create a function such that the function can be used within your shell the same way you would use a command.

	 The local keyword ensures that all of the actions taken by a particular function do not affect the global computing environment. 	
	The local keyword allows you to assign the value of a variable within a function without changing the global value of that variable.	
8.	Which of the following are not part of the Unix Philosophy?	1 point
	A program should run quickly.	
	Programs should have easy to understand error messages.	
	A program a should do one thing well.	
	✓ Programs should be quiet.	
	Programs should be composable.	
9.	What actions are taken by the following commands?	1 point
	1 chmod a+x my_program 2 chmod go-rw my_program	
	1. Allows anyone to execute my_program.	
	Prevents anyone other than the owner from reading or modifying my_program.	
	1. Allows only the owner to execute my_program.	
	Prevents anyone other than the owner from reading or modifying my_program.	
	1. Allows only the owner to execute my_program.	
	2. Prevents the owner from reading or modifying my_program.	
	1. Allows anyone to execute my_program.	
	2. Prevents the owner from reading or modifying my_program .	
10.	What is one reason you might want to modify the PATH environmental variable?	1 point
	The PATH can be modified in the bash profile which is where aliases are defined. The bash profile is run ever time you start a shell.	ry
	Modifying the PATH makes it easier to switch between programs when you are using multiple shells at once.	
	You can add a directory containing your own programs to the PATH which allows you to access them on the command line.	
	O You can make functions available to you on the command line by including the PATH variable inside of the definition of a function.
